HP 901 Black & HP 901 Colour Cartridge Refill Instructions

Refill Instructions

1. Read the instructions fully first before using the ink refill kit.

2. Put some newspaper down in case of any mess.

3. Seal the outlet hole with an adhesive tape .

4. Remove the label on the top of the cartridge to find the filling holes.

5. Fill the syringe with 5 ml. of required colour ink or black ink, dependant on which cartridge you are refilling.

6. Start injecting the ink into the cartridge slowly through the corresponding filling hole.

    Note: You may feel a slight resistance due to the sponge existing in the cartridge

7. The cartridge is full when the ink starts to overflow, stop injecting at this time.

8. Replace the label back to block the hole.
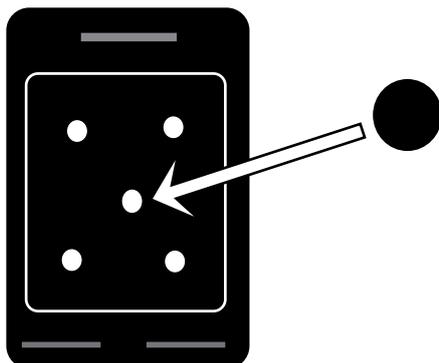

9. Return the extra ink to the bottle.

    Note: You can wash the syringe and dry it for future uses

10. Leave the cartridge for one night standing on a non-absorbent surface to make sure it doesn't leak and to give the ink the time to saturate the sponge. Please ensure you are careful when leaving overnight so if any ink was to come out of the cartridge it doesn't spill over the area you have left it.

11. Wipe the cartridge print head to remove any excess ink. Install the cartridge to the printer and run a cleaning cycle.

Note:
- For best results, once the cartridge is empty refill it immediately before the remains of the ink dries.

- You may need to turn off the ink level monitor; to turn it off please consult your printer manual.

- Pre check the colour refill holes prior to refilling as some cartridge that come with the printer from new may have a different configuration to cartridges purchased from a shop . Use the needle to probe into the holes and you should have some ink residue on the end of the needle to see what colour is in what hole. Be careful not to push too far into the sponge.
