

Canon PGI-525 Black & Canon CLI-526 Colour Cartridge Refill Instructions

A chip resetter is required for refilling these cartridges

Refill Instructions

1. Read the instructions fully first before using the ink refill kit.
2. Put some newspaper down or suitable covering in case of any spillages coming from the outlet.
3. Locate and drill a hole with the drill provided as in the below picture
4. Fill the syringe with 10 ml of black ink for the photo black ink cartridge (PGI-525) or 6ml per colour for black / colour ink cartridge (CLI-526). Dependant upon which cartridge colour you are refilling. These are guidelines as it all depends on if the cartridge is fully empty or not. Please ensure you clean the syringe and needle thoroughly between colour changes!
5. Start injecting the ink into the cartridge **slowly** through the corresponding filling holes (see below diagram).

Note: You may feel a slight resistance due to the sponge existing in the cartridge

6. The cartridge is full when the ink starts to overflow, stop injecting at this time and suck any excess ink back into the syringe.
7. Clean the refill hole and seal the hole with tape.
8. Return the extra ink to the bottle.

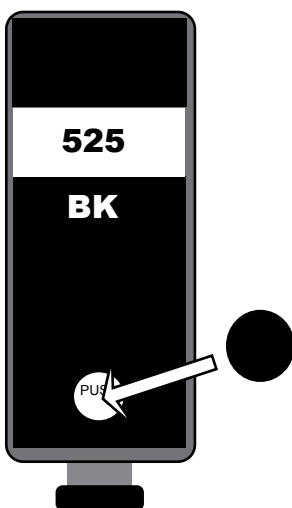

Note: You must wash the syringe and needle between colour changes. Ensure there is no water left in the syringe or needle.

9. Leave the cartridge for over night standing on a non-absorbent surface to make sure it doesn't leak and to give the ink the time to saturate the sponge inside. Please ensure you are careful when leaving overnight if any ink was to come out of the cartridge it doesn't spill over the area you have left it.
10. Next morning wipe any excess ink and ensure there is no further ink coming from the cartridge outlet. Install the cartridge to the printer and run a cleaning cycle.

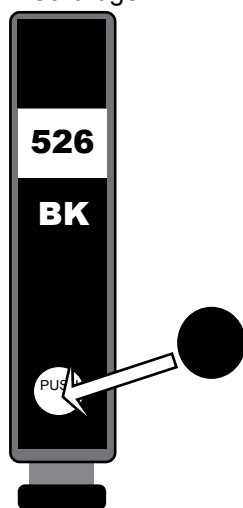

Note:

- For best results, once the cartridge is empty refill it immediately before the remains of the ink dries.
- You will need a chip resetter to reset the ink level on this type of ink cartridge
